INTRODUCING

sparktree  
**ZEMOS**  
POWERED BY MOSQUITO CONTROL

**NOW  
STEP OUT  
SAFELY WITHOUT  
THE MENACE  
OF MOSQUITOES!**

**ZEMOS** by Sparktree is a smart, eco friendly mosquito control system that greatly reduces the incidence of mosquitoes in open spaces thus minimizing the risk of vector borne diseases like dengue, malaria, chikungunya and others.

# WHAT IS sparktree ZEMOS?

Power

AC 220V

Power Consumption

150 watts

Coverage

0.5- 1 Acre

Catch Bag

Deep Conical Type

Warranty

1 Year

Attractant

Octenol | R-Octenol

Wheeled Base

Yes

LCD Panel

Yes

Water Resistant

Yes

# Existing conventional methods are short-term solutions with negative impact on health & environment

## About Sparktree Zemos

Eco-Friendly Solutions

Safe For Children and Pets

Long Term Solution

Cost Effective

Designed to withstand all weather conditions

Patented Multi-Component Luring System

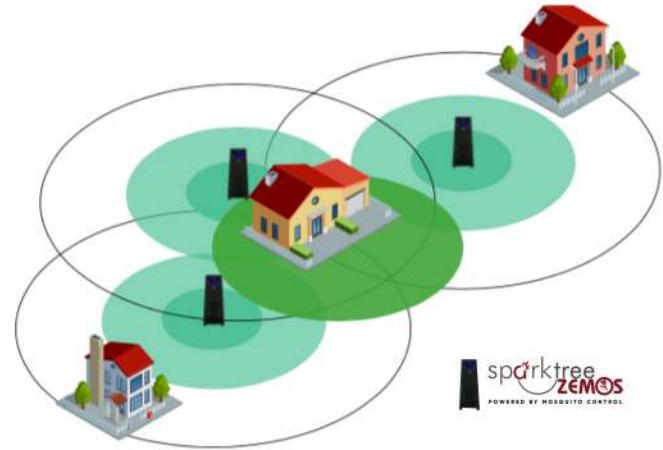

CE Certificate

# How Does It Work?

Using natural attractants like **CO<sub>2</sub>**, light and heat that imitates a living being, **Sparktree ZEMOS** attracts female mosquitoes which transmit vector-borne diseases, and eliminates them inside the device.

## Step 1

**Sparktree ZEMOS** attracts female mosquitoes by imitating a living being, using its patented multi-component luring system from Mosquito Control Ltd.

## Step 2

These vector borne disease carrying mosquitoes are pulled into the device and trapped, where they eventually die.

## Step 3

This elimination of the female mosquito disrupts the breeding cycle in the area and reduces the mosquito population.

# Where can it be used?

Mosquitoes are local insects and do not travel more than 500 feet from their breeding sites. The first results will be visible within 3-4 days. In 3-4 weeks, the mosquito population will be reduced, and breeding cycle will be disrupted. Thus creating mosquito-free zones!
